Heading 1: My sample document

Butt butt butt

Heading 2: the first section.

This document contains sample text for me to render into speech.

I copied the following text from the instructions:

From the course

Write a Python script that takes a PDF file and converts it into speech.

Too tired to read? Build a python script that takes a PDF file, identifies the text and converts the text to speech. Effectively creating a free audiobook.

AI text-to-speech has come so far. They can sound more lifelike than a real audiobook.

Using what you've learnt about HTTP requests, APIs and Python scripting, create a program that can convert PDF files to speech.

You right want to choose your own Text-To-Speech (TTS) API. But here are some you can consider:
